(54) RECORDING MEDIUM REPRODUCING DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To miniaturize a recording medium reproducing device as a whole and yet to increase the number of sheets of recording media housable and moreover, to exactly reproduce the recording media.

SOLUTION: When a desired CD is specified to be reproduced, first of all, a 1st lever 5 is horizontally moved, and a frame 1 is lifted along stepwise slots 27 and 28, and cams 2 and 3 are also lifted. Subsequently, a 2nd lever 7 is horizontally moved, and the cams 2 and 3 are horizontally moved. The cams 2 and 3 keep their prescribed height and are horizontally moved, so that contact surfaces 2a and 3a of the cams 2 and 3 are brought into contact with a 1st projecting part of a holding member for holding the prescribed CD, and moreover upward force is given to the 1st projecting part of the holding member to raise the holding member. Thus, a space just underneath the holding member for holding the prescribed CD is formed. A playback part mounted on a mounting surface 10 of the frame 1 is carried into this space.
